COLLEGE OF AGRICULTURE

Dear Reader:

It is our privilege for the Wyoming Department of Agriculture to help in providing this 1990 Edition of Wyoming Agricultural Statistics.

This report reflects the importance of agriculture to Wyoming today. However, I believe it is especially noteworthy that this Edition is being published during the Centennial celebration of our Statehood. This report reminds us of the critical importance of agriculture as we became a State, as we matured during these last 100 years, and as we look forward to our next 100 years.

Agriculture was an integral part of the Wyoming territory. The stability of our agricultural industry and the leaders of this industry helped create the foundations for Statehood.

Throughout the last 100 years, agriculture has been a featured player in our State's development. Ranching and farming have been a vital economic force. Just as important, they have provided the State its reputation for integrity, honesty, independence, strength, and friendship.

As we enter our next century of Statehood, agriculture will continue to be in the spotlight, providing the economic strength and the strength of character that makes Wyoming known as a most special State.

Sincerely,

Don Rolston

Don Rolston
Commissioner of Agriculture

1890-1990 WYOMING CENTENNIAL
A LASTING LEGACY

WYOMING AGRICULTURAL STATISTICS SERVICE

NASS, USDA

In cooperation with Wyoming Department of Agriculture

WYOMING AGRICULTURAL STATISTICS 1989-90

CENTENNIAL ISSUE

It is a pleasure to present the 1989-90 annual edition of "Wyoming Agricultural Statistics," a comprehensive report on the agricultural industry in Wyoming. A special historical section commemorating the State's centennial is also included.

There are many people who help make this bulletin possible. I wish to express my sincere "thank you" to the Wyoming farmers, ranchers and agri-business people who voluntarily provide the basic data from which the official estimates are published. My appreciation is also extended to the county extension agents, other University personnel, State and Federal Agencies for their input.

Publication of this report is made possible through the cooperative efforts and funding of the National Agricultural Statistics Service of the United States Department of Agriculture, the Wyoming Department of Agriculture and the University of Wyoming Agricultural Experiment Station.

A special thanks to the field enumerators and telephone enumerators who are an important link in our data gathering process, and to all members of my office staff for their efforts in providing quality statistics for the State of Wyoming.

Sincerely,

Samuel J. Hundley

Samuel J. Hundley
State Statistician

AGRICULTURE'S IMPORTANCE TO WYOMING

One needs only to look at the buckin' bronc and cowboy on Wyoming license plates to recognize the importance of the image and the reality of agriculture in the State.

Both farming and ranching are viable, necessary elements in the social and economic makeup of Wyoming. Agriculture is no longer only a way of life, but also a business that thousands of Wyomingites depend on for their livelihood.

Agriculture is one of Wyoming's oldest basic industries, which ranges from livestock production to the growing of common table vegetables.

In each of the State's twenty-three counties, ranching and farming are significant contributors to the overall economy, and in some counties, agriculture is the primary industry.

The primary agricultural product in Wyoming is range livestock. Because of its topography and climate, Wyoming is well adapted to livestock production, and a variety of specialized farm crops contribute significantly to the total economic blend. Among the more readily identified crops are wheat, barley, sugarbeets, hay and dry beans.

Agriculture is the major employer in the State, and provides a significant portion of the tax base. Dollars generated in agriculture are essential to the stability of local wholesale and retail business communities. Hundreds of related businesses depend in whole or in part upon the dollars generated by Wyoming farmers and ranchers.

More than 8,700 families in Wyoming are directly engaged in the business of production agriculture, and thousands more depend in whole or in part upon the revenue generated from agriculture.

Agricultural and timber economic activity is responsible for more than 29,050 full-time jobs statewide of which two-thirds are not in direct production agriculture. Another 1,400 persons are directly engaged in timber production. In many counties, agriculture stabilized local economies, as well as local schools, governments, and social structure.

Ranches and farms also provide much of the habitat and forage for the State's expanding wildlife populations, along with the open space and scenic vistas upon which Wyoming's growing tourism industry is dependent.

As we look toward the 21st century, Wyoming's agriculture industry will continue to be an important element in the State's economic picture.

CONGRATULATIONS WYOMING

WYOMING AGRICULTURE 1988-89

Agriculture has always been a major industry in Wyoming, and its importance to the State's economic stability will continue. Total **cash receipts** from Wyoming agricultural production in 1988 amounted to just over $730 million. This was generated by the State's 8,900 farms and ranches, which average 3,910 acres in size.

In 1988, 79 percent of Wyoming farm and ranch cash receipts came from marketing livestock and livestock products. Rangeland in Wyoming is well suited to livestock production, with approximately 45 million acres, or 72 percent of the State being utilized for livestock grazing. Beef cattle and sheep are the principle livestock grown in Wyoming. The January 1, 1990 inventory of **cattle and calves** totaled 1,220,000 head, with a value of $835,700,000. **Sheep and lamb** inventory numbers were 840,000 head on January 1, 1990, with a value of $71,820,000. Wyoming ranks **third** nationally in **sheep and lamb production**, and **sixth** for **sheep on feed** for slaughter. The State is **second** in **wool production**. A limited number of hogs and chickens are also raised in Wyoming, and in 1989, 40,000 honey bee colonies were counted in the State.

Located within the Great Plains and the Rocky Mountain Physigraphic Regions, **Wyoming** is the **ninth largest** State in the Union. The majority of the State's 97,914 square mile area is public land, with **48 percent** of the total land area owned by the **Federal Government**. **Six percent** of the lands in Wyoming are **State Lands, 4 percent** are **Indian Trust Lands**, and the remaining **42 percent** are **privately owned**.

The dissimilarity of topography results in considerable climatic variations throughout the State, thus, affecting Wyoming's agricultural posture. Classified as arid and semi-arid, Wyoming receives 5 to 16 inches of moisture per year, depending upon location. From 10 to 16 inches of precipitation a year falls upon the State's high plains areas; while intermountain valleys and basins receive from 5 to 9 inches. Winter snow accumulations in the high mountains, followed by spring and early summer runoffs, supply irrigation water to a variety of crops. Temperatures have been recorded from 60 degrees below zero to as high as 115 degrees Fahrenheit. The agricultural growing season varies from 130 frost free days in some northern and eastern basins to less than 30 days in intermountain basins located in the western part of Wyoming.

The major crop producing areas in Wyoming are located in the southeastern section of the State and the Big Horn and Wind River Basins, located in the north central and central parts of the State. In 1988 and 1989, hay, sugarbeets, barley and wheat were the leading cash crops. Other important cash crops are dry beans, corn, oats and potatoes. The **total value** of all crops produced in Wyoming in 1989 (excluding sugarbeets) was **$231 million**, virtually unchanged from 1988. Sugarbeet value in 1988 was $51.3 million. Wyoming produces high quality, high altitude alfalfa and native hay. A total of 1.8 million tons of **hay** was harvested in 1989, from 1.1 million acres, with a value of $155 million. About 80 percent of the hay is irrigated.

Wyoming ranks **seventh** nationally in **sugarbeet** production. One million, one hundred thirty-nine thousand tons of sugarbeets were harvested in 1989, from 59,300 acres. All the sugarbeets are irrigated and contracted to the beet processing companies located in and around the State.

Wyoming ranks **eleventh** in the Nation in the production of **barley**. Most of Wyoming's barley is utilized in the brewing industry, with some barley being sold as a high quality feed grain. All but 13,000 of the 100,000 acres harvested were under irrigation.

Wheat is the major grain crop in Wyoming. Dry land wheat grows well during Wyoming's short growing season, and under careful management, 20-35 bushels of wheat per acre can be produced. In 1989, **winter wheat** production was 4.25 million bushels, compared to **spring wheat** production of 462,000 bushels. Dry land wheat is usually part of a two-year wheat-fallow rotation in areas with less than 20 inches of rainfall. The usual planting dates for hard red winter wheat are August 20 to September 25, with harvest the following summer from July 20 to August 25. Only 8 percent of all wheat was irrigated during 1989.

Pinto and **Great Northern beans** are the two primary types of dry edible beans grown in Wyoming. The State ranked **ninth** in the Nation in 1989, producing 851,000 cwt. of high quality **dry edible beans**, of which nearly all are irrigated. Corn is grown in Wyoming primarily for grain or silage. **Corn for grain** production totaled 3,895,000 bushels in 1989, from 41,000 acres, while **corn silage** production was 752,000 tons from 47,000 acres. Almost all corn in Wyoming is irrigated. **Fall potato** production in 1989 was 578,000 cwt., from 2,100 irrigated acres.

SPRING FREEZE HAZARD TABLE

NOTE: Persons using this table should establish the temperature relationship between one or two of the nearest stations listed and their own locale. This is because the generally rough terrain of Wyoming produces many variations in climate from one point to the next.

PROBABILITY OF TEMPERATURE DROPPING TO 32° AND 28° PRIOR TO DATE SHOWN, BY SELECTED STATIONS, WYOMING

FALL FREEZE HAZARD TABLE

NOTE: Persons using this table should establish the temperature relationship between one or two of the nearest stations listed and their own locale. This is because the generally rough terrain of Wyoming produces many variations in climate from one point to the next.

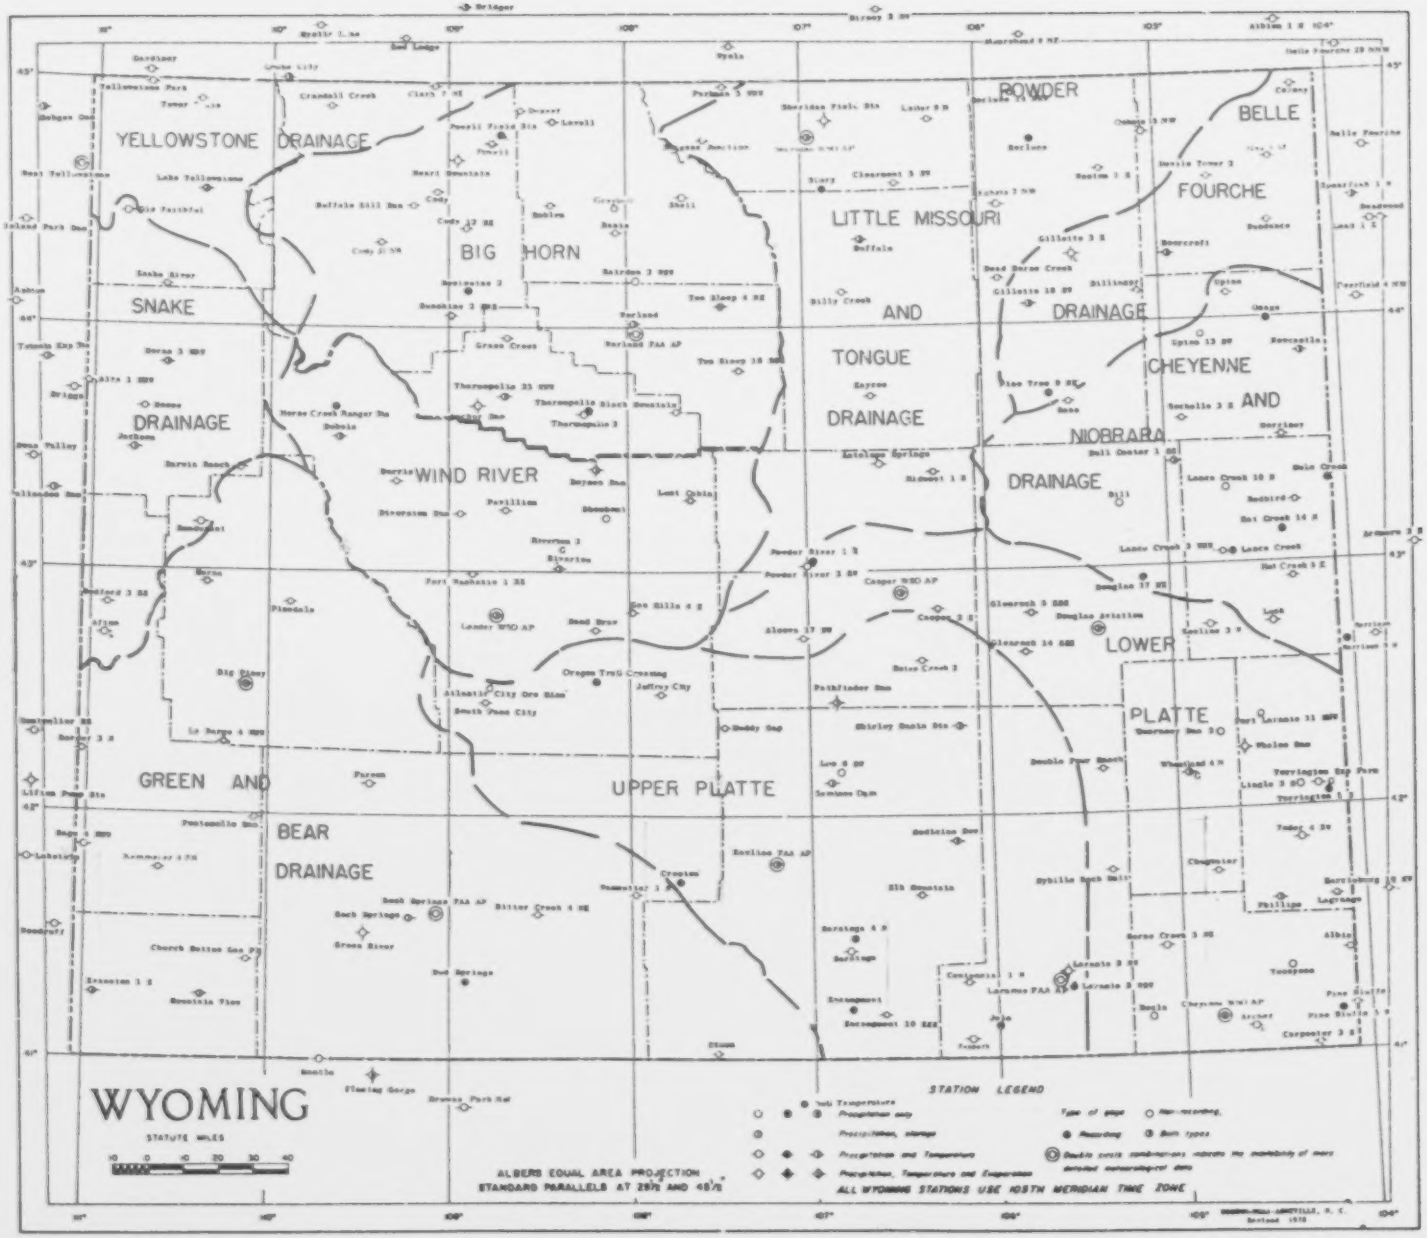
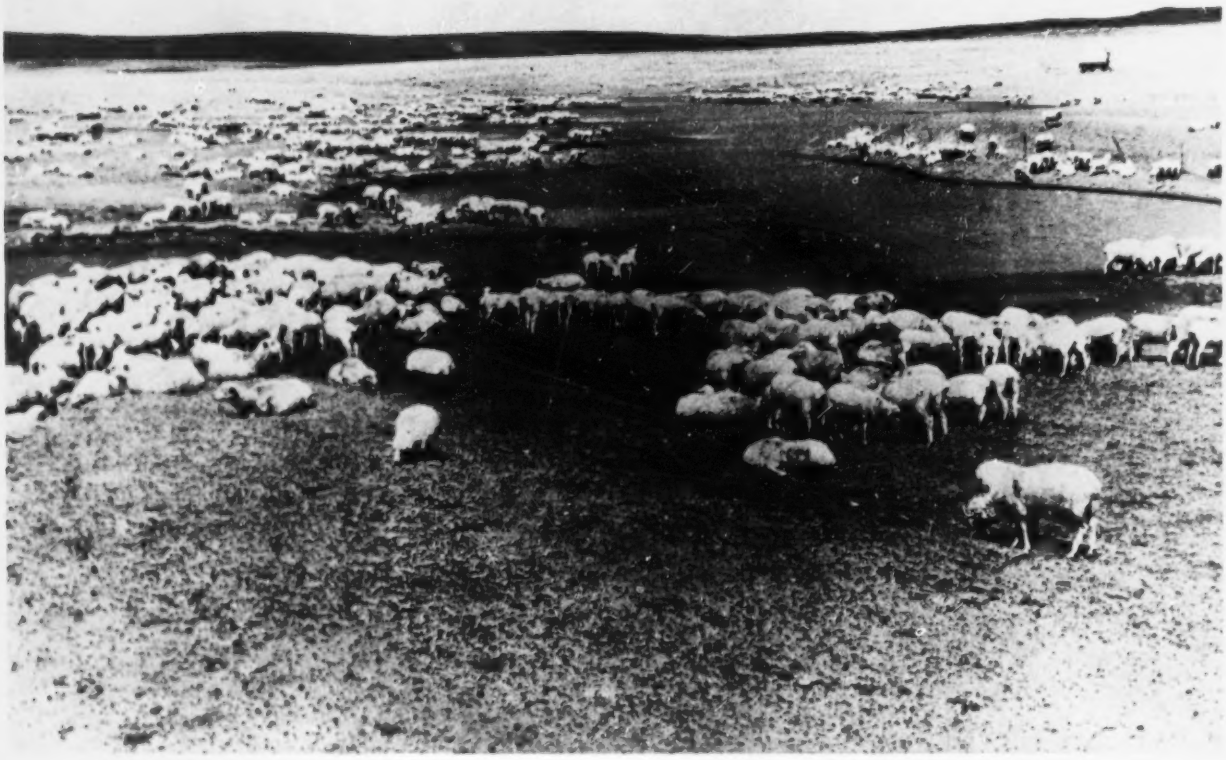
RIVER DRAINAGE AREAS



LIVESTOCK



ALL CATTLE AND CALVES on Wyoming farms and ranches totaled 1,220,000 head on January 1, 1990. This represents a 12 percent decline from the January 1, 1989 inventory. Goshen County ranked first in total cattle and calf numbers, followed by Carbon and Fremont counties. An estimated 75,000 cattle were on feed for slaughter as of January 1, 1990. The inventory of all cows that have calved declined 5 percent to 660,000 head, while beef cow replacement heifers declined 12 percent from the previous year to 140,000 head. An estimated 640,000 calves were born on Wyoming farms and ranches during 1989, 3 percent less than in 1988. The January 1, 1990 average value per head for cattle was $685.00 up $45.00 from 1989, and $115.00 above 1988.

The number of **MILK COWS** in Wyoming herds during 1989 averaged 10,100 head, 1 percent above the 1988 inventory. Milk production for 1989 declined 1 percent to 124 million pounds, for an average per cow production of 12,277 pounds. The average price received for milk was $12.40 per cwt., during 1989, $.90 above the 1988 price.

The number of **SHEEP AND LAMBS** on farms and ranches in Wyoming on January 1, 1990, increased slightly from the 1989 inventory to 840,000 head. This includes 740,000 stock sheep and 100,000 sheep and lambs on feed for slaughter. Stock sheep were up 3 percent while sheep and lambs on feed declined 15 percent from 1989. Johnson County led the State in stock sheep inventory, followed by Natrona and Converse counties. The 1989 lamb crop totaled 570,000 head, unchanged from a year ago. Sheep producers averaged 103 lambs per 100 breeding ewes in 1989, compared to 97 lambs per 100 ewes the previous year. The January 1, 1990 value per head for sheep and lambs averaged $85.50, down $1.50 from January 1, 1989.

Producers lost an estimated 96,000 sheep and lambs to all causes during 1989, 26 percent less than in 1988. Weather related deaths accounted for 10.4 percent of the total death losses while predators accounted for 41 percent of the total losses. However, total predator losses, at 39,400 head, was down 17 percent from the previous year. Coyotes continued to cause the most predator losses, followed by eagles and fox. The economic loss to sheep producers caused by predators in 1989 was an estimated $2,073,560.

An estimated 7,930,000 pounds of **WOOL** was produced in Wyoming during 1989, 3 percent less than the previous year. The total value of wool produced in Wyoming was $10,864,000 down 20 percent from 1988. The average price for wool in 1989 was $1.37 per pound, down $.28 from the previous year.

The total number of **HOGS AND PIGS** on hand in Wyoming on December 1, 1989, was 16,000 head, 24 percent below the 1988 inventory. Breeding hog inventory declined 50 percent to 2,000 head, while the number of market hogs declined 18 percent to 14,000 head. The 1989 pig crop totaled 34,000 head, down 26 percent from 1988. Producers weaned an average of 7.9 pigs per litter from 4,300 sows that farrowed during the year. The average value per head for hogs and pigs increased $4.50 from 1988 to $76.50.

The inventory of **CHICKENS** in Wyoming farm flocks totaled 13,000 birds on December 1, 1989, 32 percent less than the previous year. An estimated 2,300,000 eggs were produced in 1989 from an average of 13,000 hens and pullets of laying age during the year.

1/ Excludes milk sucked by calves.
2/ Includes the equivalent amounts of milk for cream sold to plants and dealers and milk produced by dealer's own herds.
3/ Sales directly to consumers by producers who sell only milk from their own herds. Also includes milk produced by institutional herds. Wyoming sales are not published due to small quantity sold.

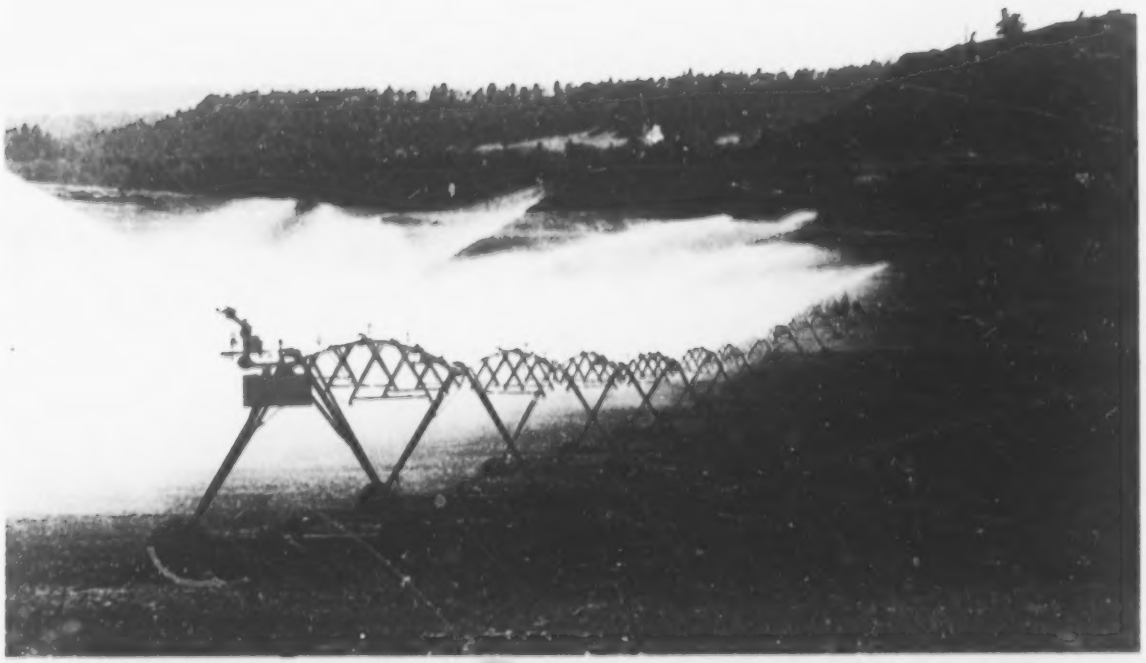
1/ Totals may not add due to rounding.

2/ Includes total beef, veal, pork, lamb and mutton, excluding farm slaughter.

3/ Calf slaughter not shown because insignificant numbers slaughtered.

CROPS



CROPS 1989

Wyoming's winter of 1988-89 was mild. Snowfall was lighter than normal producing a snow pack that was below historic averages in most areas. Temperatures were mild except for several Artic air masses which produced bitter cold temperatures. Farmers were able to get a small amount of fieldwork done in **March**, although wet fields, snow and cool temperatures slowed land preparation for planting. Warm, dry weather during **April** allowed farmers to get an early start on land preparation for seeding spring planted crops. Poor moisture conditions slowed seeding and germination of crops over much of the State. Cool temperatures and poor soil moisture conditions during **May** continued to slow germination and plant growth. At the end of May, topsoil moisture was short in 73 percent of the State and critical shortages of irrigation water supplies were beginning to show up.

Overall average temperatures during **June** were below normal, however, it was a month of contrast with record temperatures as high as 105 degrees followed by record lows as low as 24 degrees. Crops received frost damage in a few areas. Precipitation was below normal over most of the State. Topsoil moisture was short in 64 percent of the State by the end of the month. Irrigation water was in short supply in many areas with usage being limited in some. Small grains were in fair to mostly good condition. The hay harvest got underway in early June, but progressed slower than in previous years.

Drought-like conditions existed during **July**. Temperatures were in the 90-100 degree range during the first half of the month with 80 to 90 degree temperatures reported during the latter half. Precipitation was generally light and limited to scattered afternoon thundershowers. Most of the State had received below normal precipitation since the first of the year. Topsoil moisture was reported short in 84 percent of the State by the end of July. Irrigation water continued to be in short supply with usage still limited in some areas. Some crops were abandoned due to the lack of water. Small grains and row crops were in fair to good condition, but maturing slower than normal. The hay harvest continued to progress at a slower than normal rate.

The hot, dry weather continued throughout **August** with daytime highs reaching as high as 103 degrees. Precipitation continued to be light and generally limited to afternoon thundershowers. At the end of August, both topsoil and subsoil moisture were short in 81 percent of the State. Irrigation water continued to be in short supply and several areas were out of water. Small grains were maturing faster than normal due to the hot, dry weather conditions. Yields were generally below historic levels. Row crop development was slower than usual. Haying continued at a slow pace. **September** brought cooler temperatures and much needed precipitation with rainfall above normal. Most areas received a killing frost during the second week of the month. Topsoil moisture improved and was adequate in 51 percent of the State at the month's end. Seeding of the 1990 winter wheat crop got off to a slow start as farmers waited for moisture, but picked up speed as moisture arrived. Harvesting of spring planted grains progressed rapidly and was in the windup stages in most areas by the end of September. The corn crop was maturing slower than usual. Sugarbeet harvest was underway and progressing at a normal rate. Harvesting of dry beans was progressing slower than usual.

Temperatures during **October** were generally above normal with below normal precipitation. All of the State had received a killing frost by mid-October. At the month's end, topsoil moisture was adequate in 53 percent of the State. Most of the dry beans and potatoes were harvested. Sugarbeet harvest was in the windup stages. Corn harvesting was active as the crop dried out; most was harvested by mid-November. Temperatures during November continued to be above normal while precipitation was below normal. The 1990 winter wheat crop went into the winter in fair to mostly good condition.

WINTER WHEAT production at 4,246,000 bushels was off one percent from 1988. Average yield at 22.0 bushels per acre was unchanged from the previous year. Acres harvested totaled 193,000, down 2,000 acres from 1988. Farmers seeded 195,000 acres of winter wheat for harvest in 1990, 20,000 less than was planted for the 1989 crop.

SPRING WHEAT production was up 18 percent from 1988 with total production reported at 462,000 bushels. An average yield of 42.0 bushels per acre was obtained from 11,000 harvested acres.

BARLEY production totaled 7,200,000 bushels, an increase of 8 percent from 1988. Average yield, at 72.0 bushels, was up 14.0 bushels from last year. Harvested acres at 100,000, declined 15,000 from the previous year.

OAT production, at 1,410,000 bushels, increased 15 percent from 1988. Farmers harvested 30,000 acres with an average yield of 47.0 bushels per acre. Harvested acres declined 5,000 acres while average yield was up 12.0 bushels from 1988.

CORN FOR GRAIN production totaled 3,895,000 bushels, down 40 percent from 1988. Farmers harvested 41,000 acres with an average yield of 95.0 bushels per acre. Harvested acres were down 12,000, while average yield declined 27.0 bushels per acre.

CORN FOR SILAGE production at 752,000 tons increased 39 percent from 1988. Yields averaged 16.0 tons per acre from 47,000 harvested acres. Acres harvested as silage were up 17,000, while yields were off 2.0 tons per acre.

DRY BEAN production, at 851,000 hundredweight, rose 26 percent from 1988. An average yield of 1,890 pounds was 40 pounds below 1988. Harvested acres, at 45,000 were 10,000 above the previous year. Pinto beans accounted for 753,000 hundredweight of the total production. An average yield of 1,860 was obtained from 40,500 acres. Great Northern beans accounted for 98,000 hundredweight of the production. An average yield of 2,180 pounds was obtained from 4,500 acres.

POTATO production totaled 578,000 hundredweight, up 22 percent from 1988. Growers harvested 2,100 acres with an average yield of 275 hundredweight per acre. Harvested acres were up 200 and yields increased 25 hundredweight from 1988.

SUGARBEET production at 1,139,000 tons, increased slightly from 1988. Harvested acres totaled 59,300, 3,300 more than the previous year. Yields averaged 19.2 tons per acre, compared to 20.3 tons a year earlier.

ALFALFA HAY production at 1,196,000 tons was unchanged from 1988. Producers harvested 520,000 acres with an average yield of 2.30 tons per acre. Harvested acres and yield were unchanged from last year.

OTHER HAY production totaled 580,000 tons, down 15 percent from a year earlier. Producers harvested 580,000 acres, 40,000 less than in 1988. Yields averaged 1.00 ton per acre, off .10 ton from a year earlier.

PRICES

The index of **CROP PRICES RECEIVED** by Wyoming's farmers and ranchers in 1989 topped off in both May and June, with a reading of 363 percent of the January-December 1967 average. This was the highest level for crop prices since June 1981. The index remained fairly steady throughout the crop year with the low being 313 percent of the 1967 base in September. The index of **LIVESTOCK PRICES RECEIVED** reached a high of 319 percent of the 1967 base in March with a low of 282 percent in November. There was little change to the livestock prices received index from the 1988 levels. The **ALL COMMODITIES PRICE** index figures were up from 1988 levels during most of the year, with only the last quarter showing some decline. A high of 328 percent of the January-December 1967 average in March was the record high since the series began in 1960.

BEEF CATTLE prices during 1989 ranged from a low of $61.40 per cwt. in July, followed back by a high of $74.50 per cwt. in August. The August price was the highest since September 1979. **STEER AND HEIFER** prices were mostly higher in 1989 compared to the 1988 prices. They ranged from $73.40 per cwt. in May to $83.60 per cwt. in August, the highest price since April 1979. **COW** prices remained fairly steady and fluctuated only slightly from the previous year, ranging from $49.40 per cwt. to $58.30 per cwt. The price of **CALVES** continued to be fairly strong throughout 1989. A low of $88.30 and $88.50 per cwt. was reported in May and June respectively, but prices for the remaining months were in the $90.00-$100.00 range with a high of $108.00 per cwt. in August. This was a record high price for calves since the series began in 1946. Based on these monthly prices, the market year average prices for cattle were mostly higher than in 1988. The market year average prices are as follows: beef cattle, $68.40 per cwt.; steers and heifers, $81.00 per cwt.; cows, $51.80 per cwt.; calves, $94.00 per cwt.; and milk cows at $940.00 per head.

SHEEP prices started and finished the year at high levels with the high reaching $33.30 per cwt. in February. The low price was $14.90 per cwt. in June. **LAMB** prices fluctuated mostly in the mid $60's to low $70's during the year. A high price of $73.80 per cwt. was reached in May, with a low price of $57.10 being reached in November. A high of $1.49 per pound for **WOOL** was reached in both February and March. The price for wool went down gradually from there to reach a low of $.86 per pound in December. Marketing year average prices were: sheep, $18.30 per cwt.; lambs, $65.90 per cwt.; and wool, $1.37 per pound.

HOG prices started off weaker than 1988 levels, but finished the year stronger. The April price at $35.80 per cwt. was the low, with December's price at $47.40 per cwt. being the high price.

MILK prices reached an all time record high of $14.80 per cwt. in December, and overall trended higher than 1988 levels. Prices were mostly in the $11-$12 per cwt. range. July's price of $11.10 per cwt. was the low for the year.

The drought of 1988 and 1989 caused a shortage of hay supplies, and producers saw **ALFALFA** and **ALL HAY** climb to record high prices. Alfalfa prices ranged mostly from the mid $80's to the mid $90's per ton, with a low of $84.00 per ton in July, to a high of $96.00 per ton in May. The all hay price also was strong with a low of $80.00 per ton in July, to a high of $93.00 per ton in May. Both the $96.00 per ton for alfalfa and the $93.00 per ton price for all hay were all time record highs.

CORN prices started out the year above 1988 levels, but dropped off somewhat toward the end of the year. A high price of $2.80 per bushel was obtained in January, followed by a low price of $2.18 per bushel in October.

FEED BARLEY prices started and finished strong with a high of $2.47 per bushel in February. A low price of $1.88 per bushel was reported in August. The **ALL BARLEY** price again reflected increases in prices in months when the malt barley was harvested. Prices ranged from a high of $3.46 per bushel in August, to a low of $2.21 per bushel in October.

WHEAT prices were mostly higher from 1988 levels, topping the year out at $4.02 per bushel in June. This was the highest wheat price since January 1981. Wheat prices remained steady and reached a low of $3.60 per bushel in September.

DRY BEAN prices continued increasing from the end of 1988 through June 1989, where a high of $34.90 per cwt. was reached. This was the highest price since June 1981. A low of $23.00 per cwt. was reported in September.

OAT prices reached a high of $2.45 per bushel in January, and went down from there. A low of $1.40 per bushel occurred in both September and October.

PRICES PAID by farmers and ranchers for L.P. gas and diesel remained fairly steady from 1988 levels. However, farmers and ranchers paid slightly higher prices for regular and unleaded gasoline.

DEPARTMENT OF AGRICULTURE ACCOMPLISHMENTS

As Wyoming enters its second hundred years of Statehood, the Department of Agriculture can look back on a centennial of progress. Taking a leadership role within the agriculture industry, the Department provides knowledge and expertise in the production, marketing and delivery of consumer goods to the marketplace. The following is a quick overview of what the Department has accomplished in recent years:

- Established a management control system that coordinates agency mission statement, goals and budget with division objectives and employee work plans/evaluations.
- Initiated a systematic analysis of critical issues so the Department, Board of Agriculture and Governor could more knowledgeably develop State agriculture policy.
- Developed a "Strategic Plan for Wyoming's Agriculture Industry, 1990-2000" with College of Agriculture, Wyoming Wool Growers, Rocky Mountain Farmers Union, Wyoming Farm Bureau and Wyoming Stock Growers. Pinpointed critical needs and business opportunities.
- Identified business management as a critical need; developed and distributed 2,500 "Agriculture Business Plan" workbooks to producers and conducted thirty Business Management Seminars.
- Created and staffed an agriculture marketing program to develop and open new national and international markets for Wyoming's agricultural producers.
- Reorganized the Standards and Consumer Services Division to increase specialization and increase the quality of inspections.
- Wrote a business plan for the Wyoming State Fair to increase income, control costs, meet the needs of client groups and allow the Fair to become self-supporting (except for capital construction and youth programs) by the year 2000.
- Initiated with the Colorado Department of Agriculture a national, integrated program for the biological control of Russian Wheat Aphids, helped form a national task force and obtained additional federal dollars for program implementation.
- Designed and funded an integrated Beet Leaf Hopper program in the Big Horn Basin with the Beet Grower's Association, the beet processors and local county government.
- Served on the Secretary of Agriculture's National Advisory Committee on Animal Damage Control and influenced the direction of this critical federal program.
- Initiated a cooperative agreement for control of noxious weeds in the Greater Yellowstone Area among Wyoming, Montana, Idaho, the Bureau of Land Management, two national parks and six national forests.
- Developed with USDA, a new cooperative agreement which provides Wyoming with necessary agricultural statistics with reduced staff and budget.
- Compiled through the College of Agriculture, data demonstrating the economic impact of agriculture to the State and its communities and identified areas of potential growth.

COLLEGE OF AGRICULTURE

- Originated an enforcement program for applicator pesticide use and distribution to compliment our certification and licensing program.
- Became the designated functional agency for non-point source water pollution.
- Established a cooperative program with County/State health departments to control wildlife or domestic animals with communicable diseases.
- Developed the Weed and Pest Special Management Program which was passed by the State Legislature in February, 1989.
- Organized the Intermountain Noxious Weed Adhoc Committee of six states, seven trade associations, and three federal agencies.
- Helped organize the first Noxious Weed Management Coordination Workshop, which involved 10 states and several federal agencies.
- Arranged exhibit booth space of Wyoming projects at major restaurants, food service and buyers trade shows across the United States.
- Published annual directories of Wyoming products and trade associations.
- Assisted commodity groups in developing videos and brochures as sales tools and exhibits at trade shows, and provided a computer bulletin board for product availability and quality.
- Wrote a business plan for building a lamb processing facility in Wyoming.
- Cooperated with the University of Wyoming to compile the first North American census of buffalo/bison.
- Opened markets in England and Taiwan for Rocky Mountain wool, and in Taiwan for sugarbeet pellets.
- Obtained tentative approval of a federal grant for development of aquaculture.
- Developed a cooperative program with the Department of Health to reduce duplication in food and food service inspections and better utilize State personnel.
- Tested and inspected scales, fuel pumps, refined fuel/LPG meters, consumer goods and other weighing and measuring devices to ensure consumer protection.
- Inspected/audited all persons or establishments who buy, sell, or store grain, and sampled and graded wheat, barley, beans, and potatoes to ensure quality.
- Increased seed, chemical and bacteriological analysis of products marketed or manufactured in the State by 3%, while decreasing analysis time by one day.
- Increased non-fair time user days at the Wyoming State Fair from 241 in 1987, to 342 in 1988, and increased non-fair time revenue almost 8%.
